School Club Promotion Website

Problem

Create a responsive School Club Promotion Website for a fictional student club or school organization.

The website should promote the club's purpose, activities, and achievements while demonstrating your ability to use HTML, JavaScript, and Bootstrap.

1. Home Section

Create a **Home** section containing:

- School club or organization name
- Short introduction describing the club's purpose
- Main club or activity image
- Short promotional message encouraging students to join
- **Live date and time** using JavaScript
- An embedded local video showcasing club activities, projects, or achievements

2. Gallery Section

Create a Gallery section containing at least three images of club activities or organization-related content.

Examples:

- Club events
- Workshops
- Community projects
- Competitions
- Member achievements
- Club meetings

Use the **Bootstrap Grid System** to arrange the images responsively.

3. Contact Section

Create a Contact section containing a club inquiry form with:

- Student Name

- Email Address
- Contact Number
- Course / Year Level
- Subject
- Message / Inquiry
- Submit button

Implement **JavaScript form validation**.

The form should:

- Check that required fields are not empty.
- Validate the email address.
- Display an appropriate message when the input is invalid.
- Prevent the form from being submitted when validation fails.

4. Navigation Bar

Create a Bootstrap navigation bar containing exactly these three menu items:

- **Home**
- **Gallery**
- **Contact**

Each menu item must navigate to its corresponding section using HTML section IDs and href="#sectionID".

5. Technical Requirements

Your website must:

- Use **HTML**
- Use **JavaScript**
- Use **Bootstrap**
- Use Bootstrap's built-in classes and components.
- Use Bootstrap's grid system.
- Include local images for the Home and Gallery sections.
- Include a local video.
- Include JavaScript live date and time.
- Include JavaScript form validation.
- Be **mobile-responsive**.
- **Do not use a custom style.css file.**

6. **Running the Website**
    - Save your files in a folder named midtermpracD_YourLastName.
    - Copy the folder into your XAMPP htdocs directory.
    - Run Apache in XAMPP and open your website in the browser at:
    - http://localhost/midtermpracD_YourLastName
7. **Submission**
    - Ensure your code runs properly from the XAMPP server.
8. **Scoring Deduction**
    - Failure to follow file naming convention: –5 points.
    - Failure to integrate multimedia: –10 points.
    - Using a custom style.css file: –10 points.
    - Failure to run properly under XAMPP: –10 points.
