Community Sports Center Promotion Website

Problem

Create a responsive Community Sports Center Promotion Website for a fictional sports center or recreation facility.

The website should promote the center's facilities, activities, and services while demonstrating your ability to use HTML, JavaScript, and Bootstrap.

1. Home Section

Create a **Home** section containing:

- Sports center or recreation facility name
- Short introduction or description
- Main sports center or activity image
- Short promotional message encouraging visitors to participate
- **Live date and time** using JavaScript
- An embedded local video showcasing the facilities, sports activities, or training sessions

2. Gallery Section

Create a Gallery section containing at least three images of sports or recreation-related content.

Examples:

- Basketball courts
- Volleyball courts
- Fitness equipment
- Training sessions
- Recreational activities
- Sports events

Use the **Bootstrap Grid System** to arrange the images responsively.

3. Contact Section

Create a Contact section containing a visitor inquiry form with:

- Visitor Name
- Email Address

- Contact Number
- Preferred Visit Date
- Number of Visitors
- Message / Inquiry
- Submit button

Implement **JavaScript form validation**.

The form should:

- Check that required fields are not empty.
- Validate the email address.
- Display an appropriate message when the input is invalid.
- Prevent the form from being submitted when validation fails.

4. Navigation Bar

Create a Bootstrap navigation bar containing exactly these three menu items:

- **Home**
- **Gallery**
- **Contact**

Each menu item must navigate to its corresponding section using HTML section IDs and href="#sectionID".

5. Technical Requirements

Your website must:

- Use **HTML**
- Use **JavaScript**
- Use **Bootstrap**
- Use Bootstrap's built-in classes and components.
- Use Bootstrap's grid system.
- Include local images for the Home and Gallery sections.
- Include a local video.
- Include JavaScript live date and time.
- Include JavaScript form validation.
- Be **mobile-responsive**.
- **Do not use a custom style.css file.**

6. Running the Website

- Save your files in a folder named midtermpracE_YourLastName.
- Copy the folder into your XAMPP htdocs directory.
- Run Apache in XAMPP and open your website in the browser at:
- http://localhost/midtermpracE_YourLastName

7. Submission

- Ensure your code runs properly from the XAMPP server.

8. Scoring Deduction

- Failure to follow file naming convention: –5 points.
- Failure to integrate multimedia: –10 points.
- Using a custom style.css file: –10 points.
- Failure to run properly under XAMPP: –10 points.
