

Practical Exam

Local Food & Restaurant Promotion Website

Problem

Create a responsive **Food & Restaurant Promotion Website** for a fictional restaurant, café, or local food business.

The website should promote the restaurant's food, atmosphere, and services while demonstrating your ability to use **HTML, JavaScript, and Bootstrap**.

1. Home Section

Create a **Home** section containing:

- Restaurant or café name
- Short introduction or description
- Main food/restaurant image
- Short promotional message
- **Live date and time** using JavaScript
- An embedded **local video** showcasing the restaurant, food preparation, dining experience, or featured food

2. Gallery Section

Create a **Gallery** section containing **at least three images** of food or restaurant-related content.

Examples:

- Main dishes
- Desserts
- Beverages
- Restaurant interior
- Restaurant exterior
- Special offers

Use the **Bootstrap Grid System** to arrange the images responsively.

3. Contact / Reservation Section

Create a **Contact** section containing a customer inquiry or reservation form with:

- Customer Name
- Email Address
- Contact Number
- Preferred Date
- Number of Guests
- Message / Special Request
- Submit button

Implement **JavaScript form validation**.

The form should:

- Check that required fields are not empty.
- Validate the email address.
- Display an appropriate message when the input is invalid.
- Prevent the form from being submitted when validation fails.

4. Navigation Bar

Create a Bootstrap navigation bar containing exactly these three menu items:

- **Home**
- **Gallery**
- **Contact**

Each menu item must navigate to its corresponding section using HTML section IDs and href="#sectionID".

5. Technical Requirements

Your website must:

- Use **HTML**
- Use **JavaScript**
- Use **Bootstrap**
- Use Bootstrap's built-in classes and components.
- Use Bootstrap's grid system.
- Include at least **three images**.

- Include a **local video**.
- Include JavaScript live date and time.
- Include JavaScript form validation.
- Be **mobile-responsive**.
- **Do not use a custom style.css file.**

6. Running the Website:

- Save your files in the designated folder.
- Copy the folder into your XAMPP htdocs directory.
- Run Apache in XAMPP and open your website in the browser at:
- `http://localhost/midtermpracC_YourLastName`

7. Submission:

- Ensure your code runs properly from the XAMPP server.

8. Scoring Deduction:

- Failure to follow file naming convention: –5 points.
- Failure to integrate multimedia: –10 points.
- Using a custom style.css file: –10 points.
- Failure to run properly under XAMPP: –10 points.
